

**Bolivia** - Curamericas Global first began in Bolivia as Andean Rural Health Care, or *Consejo de Salud Rural Andino (CSRA)*. Through twenty years of partnership, we have successfully addressed the causes of maternal and childhood illness and mortality.

Figure 1 - Infant Mortality Rate (deaths/1000 for children under 1) National (Pink) vs. Curamericas Global Partner Results (blue)

**Guatemala** - Since 2002, Curamericas Global has been working in partnership with Curamericas-Guatemala to reduce the rates of infant, child, and maternal mortality in the highlands of northwest Guatemala. With your help we have established a network of thousands of local Community Health Workers and volunteers that reach impoverished Mayans with vital health services and education. Since 2002, we have reached over 100,000 people in the rural highlands

Here is a similar graph for the work in Guatemala. In 1999 in Guatemala, nobody knew the real data on deaths. Though government officials suspected, and Dr. Mario Valdez knew. The area became known as the triangle of death. Today, it is known as the triangle of life!

All numbers are estimates based on Available Final Reports, National Data and data presented by our partners. Curamericas Global evaluations are completed by outside experts, as third parties, who verify our work.

**Kenya** - When we first began discussion in Kenya, our partners the Government, indicated they did not believe there was very high death rates in their communities. They have some of the highest maternal mortality rates in the world. Just imagine what our project sites will look like in the coming years as we continue to implement our evidence-based solutions. Just imagine with us!
